A one-week course intended for clinicians and PhD students both in France and overseas who are seeking to develop knowledge and experience in the field of Translational Psychiatry and Clinical Neuroscience. The course is taught in English.

The course will focus on the dimensional approach of psychiatric disorders and on the core features of fundamental behaviours, including emotional regulation, cognition and memory that intersect diagnostic categories of psychiatric disorders.

The course provides an overview of putative mechanisms from molecular to social and environmental factors and also addresses innovative approaches ranging from epigenetics, iPS cells to mobile technology and big data analysis and how they can be implemented in the field of mental health research and clinical practice.

The course brings national and international experts from academia, clinical practice and industry to offer participants lectures from preclinical to clinical practice.

International Speakers:
Elisa Brietzke, Brazil
Robert Malenka, USA
Kate Saunders, UK
Iria Grande, Spain
Flávio Kapczinski, Canada
