PASTEUR NETWORK:
Building tomorrow's network

PASTEUR NETWORK

United for global health

Pasteur Network is a worldwide network of 33 members, united by common Pasteurian values, which include humanitarianism, universalism, rigor, transfer and free access to knowledge.

This unique model of cooperation in health brings together, beyond the independent public or private structures that constitute the network, a human and scientific community mobilised on both local and international health priorities in a logic of solidarity.

Pasteur Network members share the missions of biomedical research, public health training, innovation and technology transfer.

Present in 25 countries worldwide, within numerous endemic areas, the Pasteur Network has demonstrated time and time again its role as a major player for the benefit of global health through the One Health approach, actively contributing to improving human health.
