The Biological Resource Centre of the Institut Pasteur (CRBIP) holds collections of biological materials and information associated with them available through web catalogs covering each collection. A number of controls are performed to ensure the compliance of the biological material with the properties described by the applicant. The CRBIP facilitates the access to these biological resources, ensuring that they remain available through databases (BRC-LIMS and MODULBIO) for a sustainable use.

The CRBIP distributes its biological resources in France and abroad following safety standards for health and for the environment in compliance with regulations and laws, and ensuring maximum traceability.

The CRBIP has scientific collaborations through different research projects with national and international institutions, as well as with the bio-industry.

**OUR INTERESTS**

- To develop collaboration with new partners from Academia, Research Institutions, Bio-industry and to provide a facilitated access to high quality biological resources.
- To contribute to the discovery of new products (biomarkers, enzymes, antibiotics, natural products, etc.) from strains housed in our collections.

**INFORMATION:** Biological Resource Centres (BRCs) contain collections of culturable organisms, replicable parts of these, viable but not yet culturable organisms cells and tissues, as well as data bases containing molecular, physiological and structural information relevant to these collections and related bioinformatics.
